Causes of Gastritis

GASTRITIS is a condition which until recently has not been truly appreciated in terms of its depth . . . both in the incidence and the degree of morbidity it can produce in the patient population. But, since we began using the flexible gastro-scope, it is recognized much more frequently; . . . it is not an increase of incidence . . . just an increased recognition rate. Some factors that play a role in acute gastritis are stress, infection and alcohol, aspirin, phenylbutazone (Butazolidin) and other chemicals . . . and most cases of acute gastritis result from chemical irritation to the mucosa.
